dachman.lucas.letsgoapp2.Fragments

Class EventListCategoryFragment

```
java.lang.Object
    android.support.v4.app.Fragment
        dachman.lucas.letsgoapp2.Fragments.EventListCategoryFragment
```

All Implemented Interfaces:

[android.content.ComponentCallbacks](#), [android.view.View.OnCreateContextMenuListener](#)

```
public class EventListCategoryFragment
    extends android.support.v4.app.Fragment
```

Nested Class Summary

Nested classes/interfaces inherited from class [android.support.v4.app.Fragment](#)

```
android.support.v4.app.Fragment.InstantiationException,
android.support.v4.app.Fragment.SavedState
```

Method Summary

All Methods Static Methods Instance Methods Concrete Methods

Modifier and Type

static void

static [EventListCategoryFragment](#) [newInstance](#)([Category](#) cat)

void

Method and Description

```
addEvents(java.util.ArrayList<Event> list,
Category category, android.content.Context context)
Populates list with Event objects.
```

```
onCreate(android.os.Bundle savedInstanceState)
```

creates an instance of this fragment along with new array list and adds events to context

android.view.View

onCreateView(android.view.LayoutInflater inflater, android.view.ViewGroup container, android.os.Bundle savedInstanceState)
inflates views for activity

Constructor Detail

EventListCategoryFragment

```
public EventListCategoryFragment()
```

Method Detail

newInstance

```
public static EventListCategoryFragment newInstance(Category cat)
```

Parameters:

cat - - The Category to filter

Returns:

- A new instance of this Fragment

onCreate

```
public void onCreate(android.os.Bundle savedInstanceState)
```

creates an instance of this fragment along with new array list and adds events to context

Overrides:

onCreate in class android.support.v4.app.Fragment

Parameters:

savedInstanceState -

addEvents

```
public static void addEvents(java.util.ArrayList<Event> list,  
                             Category category,  
                             android.content.Context context)
```

Populates list with Event objects.

Parameters:

list - - the list to populate

category - - Category to filter out

context -

onCreateView

```
public android.view.View onCreateView(android.view.LayoutInflater inflater,  
                                       android.view.ViewGroup container,  
                                       android.os.Bundle savedInstanceState)
```

inflates views for activity

Overrides:

onCreateView in class android.support.v4.app.Fragment

Parameters:

inflater -

container -

savedInstanceState -
